### Cross Match Receives ASIS International Accolades Award - 1st October, 2010 -

Palm Beach Gardens, Fla. – Cross Match Technologies, Inc., a global provider of biometric identity solutions, was selected as a winner of an ASIS International Accolades award for product innovation for its SEEK® II, Secure Electronic Enrollment Kit. The award will be presented during the ASIS International 56th Annual Seminar and Exhibition running October 12-15 at the Dallas Convention Center in Dallas, Texas.

ASIS International is a leading organization for security professionals, which identifies the industry's most innovative new products, services and solutions. "It is an honor to be recognized by such a distinguished group of end users and experts in the security field," stated Mike Oehler, Vice President, Mobile Biometric Solutions at Cross Match. "We are part of an impressive group of Accolades winners and are very pleased that our SEEK II with MOBS and matching software is among the solutions chosen."

SEEK II is a multimodal mobile device that combines high-quality fingerprint capture, dual iris scan capability and rapid facial capture technology. The system is compact and portable for rugged field use in bright sunlight and adverse conditions—making it quick and easy for users to identify subjects and verify their identities. For added flexibility, SEEK II enables wireless communication and supports numerous wireless standards, including 3G.

Oehler explained, "SEEK II enrollment and verification processes are streamlined when combined with our MOBS software. When used with the Enterprise Matching software, SEEK II delivers a powerful security platform." The solution is optimized for military, border control and government agencies."

To learn more about SEEK II, please visit Cross Match at Booth #3940.

#### About Cross Match Technologies

Cross Match Technologies, Inc. is a leading global provider of biometric identity management systems, applications and enabling technologies to governments, law enforcement agencies and businesses around the world. These solutions are used to capture and process the unique physical characteristics of individuals to establish and verify their identities.
