

Cross Match Introduces Single Platen Palm Scanner

by Phil Leggiere
Friday, 27 June 2008

Cross Match Technologies Inc., Palm Garden, Fla., a provider of biometric identity solutions, has announced it will formally introduce the first FBI-certified single platen design palm scanner, the L SCAN 500P, at the National Sheriff's Association 2008 Conference in Indianapolis.

The L SCAN 500P is designed to meet the growing market demand for lightweight, flat, single platen palm systems. This demand has grown in recent years as law enforcement agencies upgrade their booking process with palm capture systems to increase the probability of matching latent prints and making positive identifications. The L SCAN 500P is equipped with an interactive LCD display including two smart buttons, descriptive icons and integrated color messages. This special feature provides a greater measure of safety for a law enforcement officer who can capture a full set of high quality prints without losing eye contact with the person being booked or enrolled.
