New Products

Intelligent Video Server

Axis Communications' AXIS 242S IV Video Server is designed to execute advanced intelligent video applications such as people counting, human detection, traffic analysis and license plate recognition. The one-channel video server is equipped with a digital signal processor that enables image and audio processing algorithms to be run inside the unit rather than in a central location, allowing for more scalability when executing embedded intelligent video applications.

Circle Inquiry #107

movement within a volume, not along a plane, the system substantially reduces false alarms, increases detection probability, and offers flexibility in camera positioning and location. The system is only sensitive to the exact area, line or point in space that is defined by the user.

Integrated Security & Building Management

RISCO Group is launching the SynopSYS integrated security and building management software solution. SynopSYS enables simplified site management and control via intuitive synoptic maps. Its functions

include the ability to control security, access control, digital video surveillance, fire and flood detection, as well as building control and maintenance systems such as HVAC and elevators. Networking capabilities provide monitoring of single and multi-site facilities via WAN or LAN.

32-Channel Real-Time DVR

Integral Technologies announces DS RealVue, the security industry's first real-time DVR capable of recording 32 cameras simultaneously at 30 frames per second at full D1 (720x480) resolution. DS RealVue products are offered in two chassis configurations: RAID and XPress (a combination database server and video acquisition unit). Using advanced compression technology, these products capture images as small as 1k at CIF resolution, resulting in smaller storage requirements and reduced network bandwidth.

Visitor Management

STOPware's PassagePoint Professional and Enterprise

Visitor Management software systems offer the Intelli-Check Document ID Verification System, with which users can meet federal requirements for verification of identity documents such as drivers' licenses. PassagePoint also offers a Visitor-e-Pass feature. When a host pre-registers a visitor using Visitor-e-Pass, the visitor receives a custom e-mail that includes visit details,

directions, and a barcode that can be scanned at entry for faster sign-in and badging.

3D Video Motion Detection

MDI Security Systems SenseEye VMD™, the only three-dimensional video motion detection surveillance system, uses two or more overlapping cameras to detect movement within a specified zone. Because it detects

Biometric PIV Solution

Cross Match Technologies

Inc. has released PIV One. With PIV One, federal agencies can create verified biometric personal identity records of employees and contractors that meet the requirements of HSPD-12 and related standards. The records can then be formatted into an Electronic Fingerprint Transmission Specification file and submitted to the FBI for background checks. In addition, the records will contain the biometric and demographic information necessary to construct standards-based, compliant smart card credentials for the individuals.
