ASIS recognises security industry's most innovative surveillance solutions

Published on 1 October 2010

ASIS International, the pre-eminent organisation for security professionals worldwide, has selected its 2010 ASIS Accolades winners. ASIS Accolades is an awards competition that recognises the security industry's most innovative new products, services, and/or solutions.

The winners will be recognised at ASIS 2010, the security industry's leading event

ASIS invited exhibitors at the ASIS International 56th Annual Seminar and Exhibits to submit new technology, product, or service

solutions for evaluation and judging for the annual Accolades competition. The winners will be recognised at ASIS 2010, the security industry's leading event, held October 12-15 at the Dallas Convention Centre in Dallas, Texas.

A team of judges representing end-users and experts in security technologies evaluated more than 70 entries before selecting the top 10 winners. ASIS Accolades are solutions oriented, not product specific.

"This year's programme was very competitive, as entrants continue to push the envelope in their respective disciplines," observed Accolades Co-Chair Ron Lander, CPP. "In particular, video surveillance performance is advancing at a rapid pace, offering enhanced analytics functionality and better resolution."

Co-Chair Howard Belfor, CPP, noted: "The continued blending of emerging technologies into readily available products and services is striking. The ubiquity of network and IP centric solutions in security is more evident than before."

Accolades entrants have been invited to display their entries in a special area on the exhibits floor (Booth Number 4219, Hall F) and winners will be highlighted, along with other new products during the Seminar's "What's New on the Floor" session, on Tuesday, October 12 at 1:45 p.m. in Ballroom C4.

Dedicated Micros' Closed IPTV SD Advanced is a completely secure IP Video security system

The winners (with booth numbers) are:

Cisco Systems, Inc., Booth Number 3351
Cisco IP Interoperability Collaboration System (IPICS) 4.0

Cisco IP Interoperability Collaboration System (IPICS) 4.0 is a scalable, comprehensive solution for communications interoperability that streamlines radio
