CROSSMATCH TECHNOLOGIES PREVIEWS NEW COMPACT PALM SCANNER

*Compact, lightweight Single Platen Palm Scanner with
Interactive LCD Display*

L SCAN® 500P is the lightest and smallest palm scanner in the industry and is designed to meet the growing market demand for lightweight, flat, single platen palm systems. This demand has grown in recent years as law enforcement agencies upgrade their booking process with palm capture systems to increase the probability of matching latent prints and making positive identifications. The L SCAN 500P is the only palm scanner in the industry equipped with a unique interactive LCD display including two smart buttons, descriptive icons and integrated color messages.

The LCD display is user-friendly and provides immediate feedback making the capture sequence easier, faster and safer. This special feature provides a greater measure of safety for a law enforcement officer who can capture a full set of high quality prints without losing eye contact with the person being booked or enrolled. An important tool in criminal investigations and forensic analysis, this device captures forensic quality images that comply with the FBI Image Quality Specification as defined in Appendix F of the EFTS. Cross Match's patented auto capture technology enables users to obtain the highest quality single capture of upper, lower and writer's palm images, each in less than one second.
