FaceSnap[®] Fotomodul

Automatic Photo Cropping Software

FaceSnap Fotomodul is a Time and Cost Saving Automatic Photo Cropping Tool

Application Environments

- Drivers' Licenses
- National Benefit Cards
- National ID Cards
- Passports
- Corporate ID Cards
- Integrators

All faces were not created equal, but with FaceSnap[®]Fotomodul software, every face comes out equally well. This easy-to-use face recognition software makes the production of identity cards quicker, easier and more quality controlled. Ideal for manufacturers, integrators or corporations, FaceSnap Fotomodul eliminates tedious editing work by automatically cropping and standardizing portraits according to pre-selected criteria. All portraits are the same size, with the same resolution and properly framed. Automatic image enhancement makes camera and lighting

adjustments optional. FaceSnap Fotomodul can be programmed for automatic or manual operation and is compatible with other client applications via standard interfaces.

By standardizing the production of identification photos, FaceSnap Fotomodul delivers quality images time after time. Once the images are captured, the software practically runs itself. FaceSnap Fotomodul eliminates unfavorable brightness and contrast, color irregularities, clipped heads and unevenly sized images for picture perfect results. FaceSnap Fotomodul features an easy-to-use Windows based navigation system allowing for either fully-automatic image processing or manual editing options.

FaceSnap® Fotomodul

Specifications

- Recommended TWAIN specifications: setting of resolution, color depth and imaging area via TWAIN interface, operating mode without GUI, 24-bit color depth.

Features

- No more posing is needed. FaceSnap Fotomodul facial recognition software only recognizes and records facial images. Position the subject anywhere within the camera's field of vision and Fotomodul automatically captures that person's face. Photo sessions are quicker and more relaxed for both the photographer and the subject.

- FaceSnap Fotomodul automatically crops the image according to a pre-selected portrait format. With this standardized framing you can be sure that all images have the same format and are of comparable resolution.
- FaceSnap Fotomodul does automatic brightness, contrast and color corrections for best image impression.
- FaceSnap Fotomodul has the option for automatic background removal for homogeneous photo backgrounds.
- FaceSnap Fotomodul is TWAIN-compatible and can be used on any modern Windows PC.

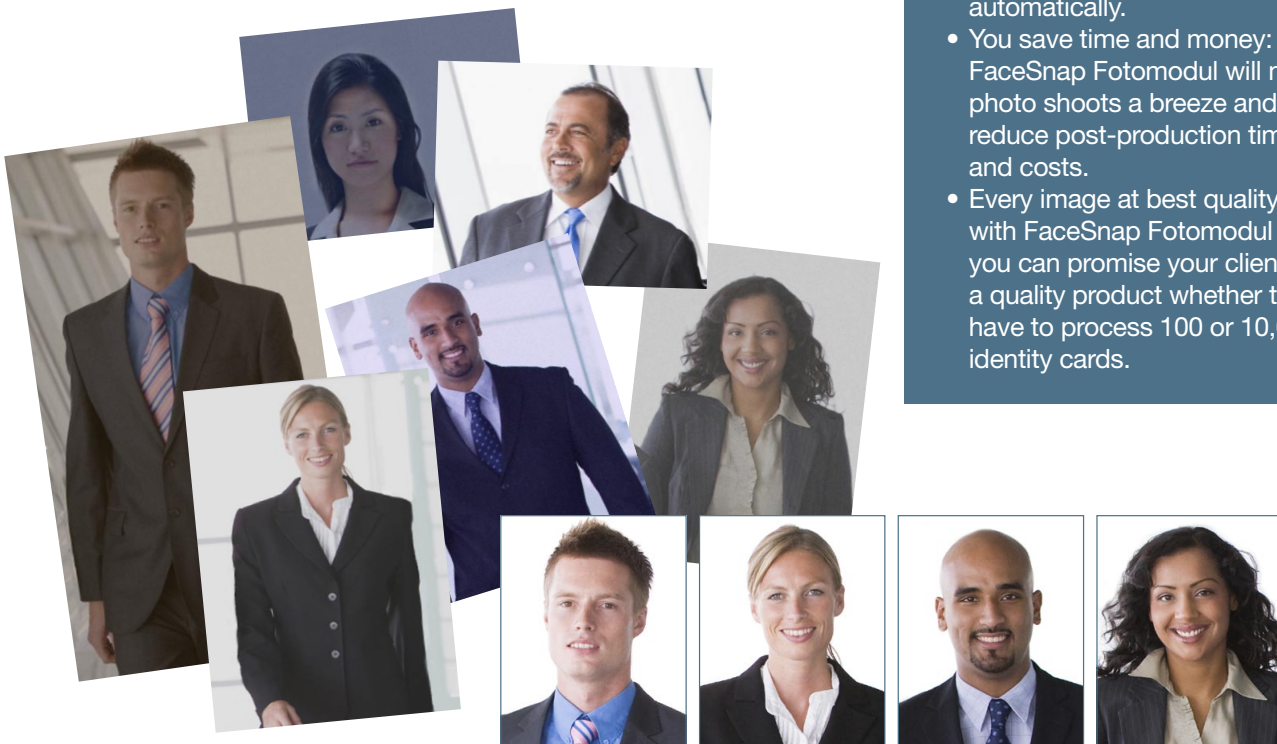

- The images can be acquired either by a TWAIN-interface or directly from a file in jpg-format.
- A FaceSnap Fotomodul SDK version is available on request.

Operating system requirements

- Windows 98/ME/2000/2003/XP, Pentium III, 128 MB RAM, 100 MB Disk, imaging device with TWAIN-compatible driver.

Benefits

- Editing and more: brightness, contrast, color correction, standardized framing, comparable resolution. FaceSnap Fotomodul does it all automatically.
- You save time and money: FaceSnap Fotomodul will make photo shoots a breeze and reduce post-production time and costs.
- Every image at best quality: with FaceSnap Fotomodul you can promise your clients a quality product whether they have to process 100 or 10,000 identity cards.
