PrisTrak™

Comprehensive fingerprint and biometric solution for tracking and managing prisoners

The PrisTrak biometric identity management system from Cross Match Technologies resolves your challenges with accurately identifying and verifying the true identities of inmates, parolees, sex offenders, work release prisoners, defendants and others as they move through the judicial system process. PrisTrak is a unique stationary system with a mobile device to capture fingerprints, photographs and demographic data of subjects whose identities must be confirmed at various stages of processing, such as inmate intake, release, court appointments, attorney meetings, parole officer check in, sex offender check in and more.

Enrollment consists of capturing fingerprints, personal data and a digital photograph. Subjects are enrolled on a high volume stationary system or mobile system from remote locations.

Digital photographs are captured using the Logitech camera in auto mode, which assists the operator by digitally panning, tilting and zooming in on the face of the subject. With the Cross Match mobile handheld MV 100, photos are captured with a built-in camera.

Activity log history shows every prisoner move; for example, when a prisoner gets on a bus, gets off a bus, enters the courthouse, gets back on the bus and checks back into a prison. All transaction data is reportable including who does the checking in and out.

Applications

- Ensure the wrong prisoner is never released
- Verify the identity of an inmate by matching fingerprints against a database of active prisoners, parolees, sex offenders or released prisoners
- Ensure a threatening prisoner does not access a court room
- Track victim retribution payments
- Ensure the inmate who got off a bus, is the same person who gets back on
- Check in with sex offenders several times a year, month, week, or day

With PrisTrak, avoid uncertainties related to identity throughout the life cycle of a prisoner and rest assured the wrong person will not be released.

PrisTrak system being used in a prison holding cell to track prisoners.

PrisTrak Key Features

- Stationary workstation for enrollment and verification, including fingerprint capture, photograph capture, demographic data input and movement status
- Fast and simple to user interface
- Available in stand alone or networked configurations
- Enterprise networked system with PrisTrak fingerprint hardware and software, central server, one-to-many fingerprint matching software and Web-based database management tool
- Share and manage data among various government organizations, divisions and departments—all centralized in one common system and manageable from anywhere using a web browser.
- Supports multiple languages
- Intelligent fingerprint systems automatically capture four fingerprints in one stage—multiple fingers are proven to increase system matching accuracy.
- Fingerprint scanner tolerable of "real-world" fingerprint conditions

PrisTrak Enterprise System Features and Options:

- Supports intake, release, property and transfer
- Multiple check point and location support
- Stationary fingerprint scanners
- PrisTrak software
- Desktop PC with touch screen flat panel monitor

- Logitech digital camera with auto digital pan, tilt and zoom
- Camera tripod
- Enterprise Match Server and software
- Administrator module with reporting
- Optional console for stationary workstations
- Web-based database application for reporting, remote access to prisoner list and histories, etc.

Security:

- U.S. Official Terrorist Threat Level settings
- Inmate "Watch list" settings
- Three user privilege levels (administrator, supervisor, normal user)
- Quick supervisor login for necessary approvals and overrides

- Built-in Windows login security
- Web access using separate login accounts
- Administrator can configure security policy
- Administrator assignable privileges
- Automatic data backup
- Emergency evacuation list

External Interface:

- XML interface to jail management systems
- Real-time activity data export via XML
- Historical activity data export via XML
- Configurable export of data by date range
- Log of all operator activity
